Professional Summary

Computer Science Engineering student with a strong foundation in Data Structures & Algorithms, Object-Oriented Programming, and SQL, backed by hands-on full-stack development experience across Java, Spring Boot, React.js, and Node.js. Comfortable working across the full development lifecycle — design, implementation, testing, and deployment — with exposure to cloud fundamentals (AWS, GCP), Git-based version control, and CI/CD pipelines. Adaptable and quick to learn new technologies and emerging skill sets, with a collaborative, detail-oriented approach to problem-solving. Open to flexible work arrangements and eager to grow through structured, hands-on training as a Graduate Engineer Trainee.

Education

KL University, Vijayawada, Andhra Pradesh *Expected May 2027*
B.Tech in Computer Science & Engineering (Specialization: Cloud Native Software Engineering)
Relevant Coursework: Cloud Computing, DevOps, Advanced Java, Design Patterns, Data Structures & Algorithms, Operating Systems

Skills

- **Core CS Fundamentals:** Data Structures & Algorithms, Object-Oriented Programming (OOP), Operating Systems, Design Patterns
- **Programming Languages:** Java, Python, JavaScript, C
- **Backend & APIs:** Java, Spring Boot, Node.js, Express.js, RESTful API Development
- **Frontend:** React.js, HTML5, CSS3, JavaScript (ES6+), Responsive UI Design
- **Databases:** SQL, MongoDB (Fundamentals)
- **Cloud & DevOps:** AWS (EC2, S3), Google Cloud Platform (GCP), Docker, Jenkins, CI/CD Pipelines
- **Tools & Practices:** Git/GitHub, Maven, Code Reviews

Projects

LoadSense AI: Smart Cloud Load Balancer Comparison Platform *React, Vite, Node.js, Express, Socket.IO, MongoDB*

- Integrated an LLM-backed chatbot, grounded in live simulation context, to answer natural-language questions about ranking changes and metric definitions.
- Built a full-stack platform benchmarking 9 industry load balancers (HAProxy, NGINX, AWS ELB, F5, GCP, Azure, Cloudflare, Citrix ADC, Traefik) against a proposed predictive scheduling model under user-defined traffic conditions.
- Engineered a real-time simulation engine streamed via Socket.IO, scoring each strategy on response time, server utilization, dropped requests, and migration cost, and re-ranking the leaderboard live as inputs change.
- Designed a MongoDB schema to persist every simulation run and its per-strategy results, enabling historical comparison across sessions via a REST API built with Node.js and Express.

Full-Stack Travel Management System *Java, Spring Boot, REST API, Docker, AWS*

- Built a full-stack travel booking platform with a Spring Boot REST API backend and React.js frontend, designed to handle 500+ concurrent user requests with 99.9% uptime.
- Designed and implemented secure RESTful APIs and business logic with JWT-based authentication, enforcing controlled data access across client and server layers.
- Automated build and deployment pipelines with Jenkins and Docker, reducing manual setup time by 40% while sustaining reliability on AWS EC2.
- Managed source control and collaborative workflows via Git/GitHub, including branching and code review practices, throughout the development lifecycle.

Certifications & Achievements

- Deloitte Data Analytics Job Simulation — Forage (Issued: November 2025)
- AWS Certified Cloud Practitioner (Issued: June 2026 – Valid through: June 2029)
- Automation Anywhere Certified Advanced Automation Professional (Advanced Developer Certification)
